

Action Packed

At first glance, the Sigma-7Siec is likely to fool you.

You wouldn't guess from its trim size that Yaskawa has packed a single-axis motion controller and a world class SERVOPACK servo amplifier into a space slimmer than most normal servo amps take up. That means less crowding in control cabinets, plus the easy familiarity of IEC61131-3 programming.

Ready for more capability in less space? Take action by contacting a Yaskawa representative about Sigma-7Siec.
