

YASKAWA

Case Study

Great Lakes Naval Station

Highlights:

- 5hp thru 50hp; 230v and 460v, NEMA 1
- Over 50 Drives with Bypass
- Application: Fans, Pumps, Cooling Towers
- Communications via Siemens APOGEE

Site Brief:

The US Navy contracted Siemens Building Technologies for a phased HVAC Retrofit. Yaskawa was selected over other competitors to supply the ac drives due to the ease of communication with Apogee and the commissioning support provided by their local area distributor. Originally contracted for phases 1-3, Yaskawa variable frequency drives continue to be the preferred choice through the current phase 10 of the on-going project.
