

YASKAWA

Case Study

Duke University - Medical Center

Highlights:

- Qty 20 Drives with Bypass
- 60 thru 200hp 460v, NEMA 1
- Supply & Return Fan Application

Site Brief:

The Medical Center is a renowned teaching center and service provider to the surrounding community. When the decision to retrofit the existing inlet guide vane system was finalized, it was imperative that the drives selected provide the reliability and uninterrupted service the center demanded.

The manufacture of the custom Penthouse air-handling units turned to Yaskawa to provide the project's variable frequency drives and motors. The drives were installed in late 1999 and have performed flawlessly.
