

YASKAWA

D1000

REGENERATIVE CONVERTER UNIT

IT'S PERSONAL

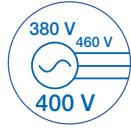

THE POWER REGENERATIVE CONVERTER UNIT

ENERGY EFFICIENT

D1000 saves energy by redirecting braking energy back onto the grid, to be used other devices, instead of wasting it as heat. By providing full braking power with 100% duty cycle capabilities, the D1000 allows for shorter machine cycles and can increase production efficiency.

REGULATED DC BUS

A controlled, boostable DC voltage guarantees the same level of DC voltage independent of the power supply voltage. Connected drives are always supplied with the same DC voltage, making machines invulnerable against locally different power supply conditions and assuring the same machine performance, no matter where it is used.

EASY TO ORDER PACKAGE

D1000 comes in an easy to order kit. Only one part number for all components makes procurement simple and assures completeness and parts compatibility.

CLEAN POWER

The sinusodial input current with a total harmonic current distortion of less than 5% and a displacement power factor of 0.99 minimizes losses in grid components like generators and transformers.

COOL OPERATION

D1000 does away with braking choppers and resistors, thus saving valuable space and reducing the risk of fire by eliminated open heating elements. By not dissipating energy as heat the demand for ventilation is greatly reduced and maintenance (resistor cleaning) is eliminated.

REDUCE COST

The D1000's energy saving capability lowers utility bills, while also expanding the existing power supply capability through heat reductions made possible by its lower input harmonic performance and regenerative capabilities

READY FOR GLOBAL USE

D1000 complies with major global standards such as UL, CE, RoHS and others.

The D1000 regenerative converter unit complements the Yaskawa product range with a low harmonic Active Front End (AFE) solution.

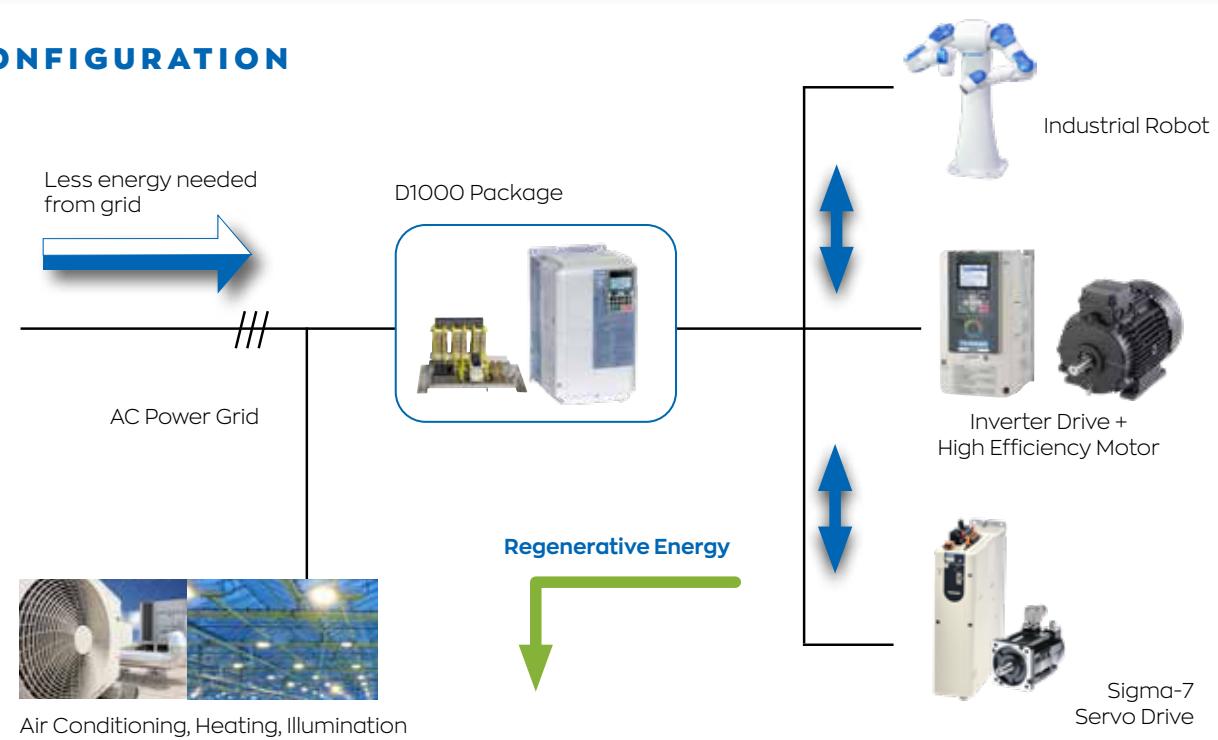

Suitable for both regenerative individual drives and systems of inverter drives, servo axis or robots, the D1000 feeds excess braking energy back into the power grid instead of dissipating it as heat.

SAVE ENERGY WITH POWER REGENERATION

D1000 is open for various configurations. Usable in one-on-one or multiple unit connection, the D1000 provides the flexibility needed to satisfy a broad range of energy efficient and low harmonics applications.

1:n CONFIGURATION

ONE-ON-ONE SYSTEM

Typical one-on-one applications like escalators, elevators, or presses have one inverter drive connected to a D1000.

Using the D1000 they take great benefit from:

- Energy cost reduction of complete installation
- Less space and heat by removed braking resistors
- Low input current harmonics facilitating IEEE 519 compliance

MULTIPLE-UNIT CONNECTION

Multiple unit systems like winders, transport systems, or packaging systems with inverter drives, servo systems or robots have an interconnected DC bus that is supplied by a single D1000. Energy is already shared in the DC bus, leading to reduced power draw from the power grid.

In addition to the benefit of one-on-one systems such applications take advantages from:

- DC bus energy sharing
- Reduced space compared to multiple drives with built-in active frontend
- Single point of supply

FOR A WIDE RANGE OF APPLICATIONS

Using the D1000 regenerative converter unit saves energy and thereby money within a broad range of applications. This includes applications with large-inertia loads, 4-quadrant loads, long-term energy feedback and quick braking.

PACKAGE SELECTION

CALCULATING THE CAPACITY FOR MULTIPLE UNITS

SINGLE UNIT CONFIGURATION (1:1)

For configurations with only one drive connected to a D1000 the correct D1000 Kit can be selected from the tables below.

200 V Class

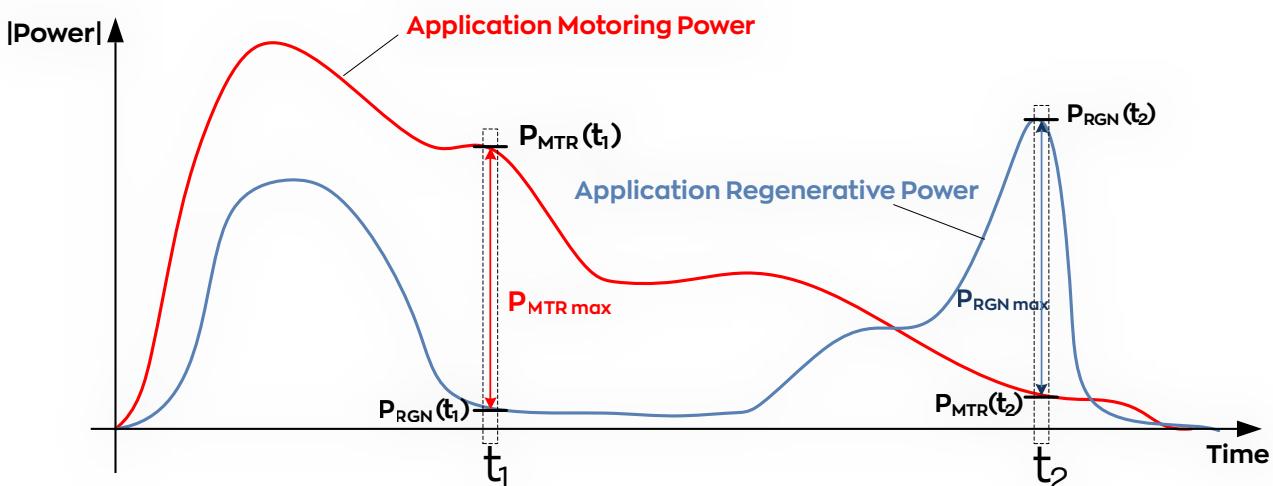

Recommended Total Motor Load HP (kW)	D1000 System Kit Number
5 (3.7)	D1000-240-5HP
10 (7.5)	D1000-240-10HP
20 (15)	D1000-240-20HP
30 (22)	D1000-240-30HP
50 (37)	D1000-240-50HP
75 (55)	D1000-240-75HP
100 (75)	D1000-240-100HP
150 (110)	D1000-240-150HP

400 V Class

Recommended Total Motor Load HP (kW)	D1000 System Kit Number
5 (3.7)	D1000-480-5HP
10 (7.5)	D1000-480-10HP
20 (15)	D1000-480-20HP
30 (22)	D1000-480-30HP
40 (30)	D1000-480-40HP
60 (45)	D1000-480-60HP
100 (75)	D1000-480-100HP
150 (110)	D1000-480-150HP
200 (160)	D1000-480-200HP
300 (220)	D1000-480-300HP
400 (315)	D1000-480-400HP
750 (560)	D1000-480-750HP

MULTIPLE UNIT CONFIGURATION (1:n)

Selecting the optimal D1000 Kit when multiple units are connected to one D1000 requires an analysis of the application. Find the moments of maximum motoring and regenerative power as shown in the example below, compare them and select the right D1000 kit.

DEFINITIONS

$$\begin{aligned} P &= \text{Power [kW]} \\ \eta &= \text{Efficiency} \\ P_{\text{MTR}} &= \text{Motoring Power} \\ P_{\text{RGN}} &= \text{Regenerative Power} \\ P_{\text{MTR}}(t) &= \sum_{i=1}^N \frac{P_{\text{Motor}_i}(t)}{\eta_{\text{Motor}_i} \cdot \eta_{\text{drive}_i}} \\ P_{\text{RGN}}(t) &= \sum_{i=1}^N P_{\text{Motor}_i}(t) \cdot \eta_{\text{Motor}_i} \cdot \eta_{\text{drive}_i} \end{aligned}$$

1. Determine the moment (t_1) when the application draws the maximum motoring power from the grid and calculate the power by subtracting the total motoring and regenerative values.

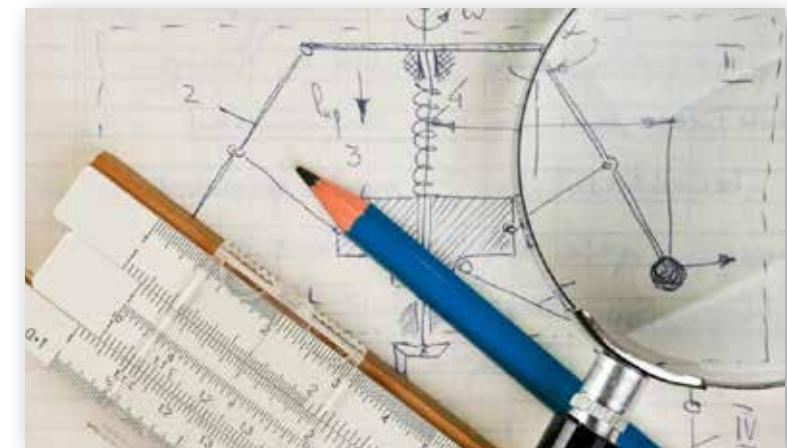

$$P_{\text{MTR max}} = P_{\text{MTR}}(t_1) - P_{\text{RGN}}(t_1)$$

2. Determine the moment (t_2) when the application returns the maximum regenerative power to the grid, and calculate the power by subtracting the total regenerative and motoring values.

$$P_{\text{RGN max}} = P_{\text{RGN}}(t_2) - P_{\text{MTR}}(t_2)$$

3. Select a D1000 with a power rating greater than

$$P_{\text{MTR max}} \text{ or } P_{\text{RGN max}}, \text{ (whichever is higher).}$$

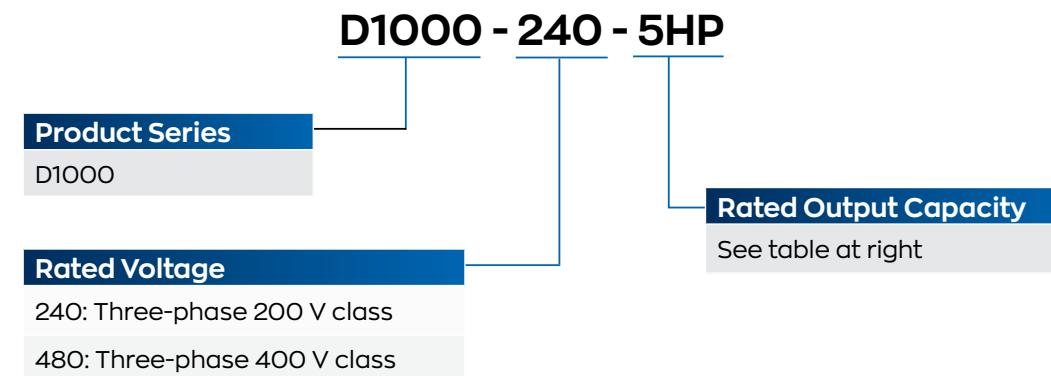

NOTES

- The minimum D1000 power rating is 1/3 of the total nominal power rating of all devices connected to the DC bus.
- If the peak power state has a duration of less than 60 seconds, the D1000 overload capability can be taken into account. This requires a closer analysis of the application. For technical assistance please contact Yaskawa support.
- If efficiencies are unknown, use a motor efficiency of 0.9 (0.85 for motors <7.5 kW) and a drive efficiency of 0.95.
- When calculating the motoring or regenerative power, the actual shaft power should be used. This is because some devices like SERVOPACKS can provide up to 300% of nominal power for a short time, which can have significant influence on D1000 selection.
- When connecting devices to the DC bus that do not have their own precharge circuit there is a limit to the amount of capacitance that can be connected to the D1000. For more information please contact Yaskawa support.
- If the interphase imbalance ratio of the power source exceeds 2%, select a D1000 unit one size larger than required by the above calculation.

TECHNICAL DATA

D1000 PACKAGES

MODEL DESIGNATION

FEATURES

- Facilitates IEEE 519 Compliance
- Less than 5% iTHD at input terminals
- Supports single-drive or multi-drive common bus configurations
- Compatible with all conventional drives having full power access to DC bus
- Overload capability of 150% for 60 seconds, 200% for 3 seconds
- Near unity true power factor at full load
- Ability to compensate for low voltage (boost function)
- Overcurrent and overheat protection

D1000 PACKAGE KIT INCLUDES:

- D1000 Regenerative Converter Unit
- Input Reactor(s)
- Harmonic Filter Module or Harmonic Filter Kit

CAPACITIES AND DIMENSIONS

Each active front end system requires a D1000 power module, filter module, and reactor(s). These systems are sold together as a single kit number as follows:

System Kit Number	Recommended Total Motor Load HP (kW) ^{*1}	System Capacity		
		Output Power (HP)	Output DC Current (DC Amps)	Input AC Current (AC Amps)
240 VAC Input (330 V DC Output)	D1000-240-5HP	5 (3.7)	6.7	15
	D1000-240-10HP	10 (7.5)	13.4	30
	D1000-240-20HP	20 (15)	26.8	61
	D1000-240-30HP	30 (22)	40	91
	D1000-240-50HP	50 (37)	67	152
	D1000-240-75HP	75 (55)	87	197
	D1000-240-100HP	100 (75)	120	273
	D1000-240-150HP	150 (110)	174	394
480 VAC Input (660 V DC Output)	D1000-480-5HP	5 (3.7)	6.7	8
	D1000-480-10HP	10 (7.5)	13.4	15
	D1000-480-20HP	20 (15)	26.8	30
	D1000-480-30HP	30 (22)	40	45
	D1000-480-40HP	40 (30)	54	61
	D1000-480-60HP	60 (45)	80	91
	D1000-480-100HP	100 (75)	134	152
	D1000-480-150HP	150 (110)	174	197
	D1000-480-200HP	200 (160)	250	280
	D1000-480-300HP	300 (220)	360	409
	D1000-480-400HP	400 (315)	500	561
	D1000-480-750HP	750 (560)	850	955

^{*1} Recommended load is stated to account for typical efficiencies of connected loads (e.g. drives and motors). Maximum continuous values can be used if specific load device efficiencies are considered.

^{*2} Dimensions shown only for D1000 power modules. Contact Yaskawa for dimensions of other components included in kit number.
