## Varispeed-656DC3

PWM TRANSISTOR CONVERTER

```
200 TO 230V, 27 TO 120HP (20 TO 90kW)
380 TO 460V, 27 TO 496HP (20 TO 370kW)
```

MODEL CIMR-DCA

Before initial operation read these instructions thoroughly, and retain for future reference.

When properly installed, operated and maintained, this equipment will provide a lifetime of service. It is mandatory that the person who operates, inspects, or maintains this equipment thoroughly read and understand this manual, before proceeding.

(1) After turning off the main circuit power supply, do not touch circuit components until "CHARGE" lamp is extinguished. The capacitors are still charged and can be quite dangerous.
(2) Do not. connect or disconnect wires and connectors while power is applied to the circuit.
(3) Do not check signals during operation.
(4) Be sure to ground VS-656DC3 using the ground terminal G (E).

## CAUTION

(1) All the potentiometers of VS-656DC3 have been adjusted at the factory. Do not change their settings unnecessarily. However, input voltage must be set according to the power supply voltage (refer to page 13).
(2) Do not make withstand voltage test on any part of the VS-656DC3 unit. It is electronic equipment using semi-conductors and vulnerable to high voltage.
(3) Control PC board employs CMOS ICs which are easily damaged by static electricity. Do not touch the CMOS elements.

## RECEIVING

This VS-656DC3 has been put through demanding tests at the factory before shipment. After unpacking, check for the following.

- Verify the part numbers with the purchase order sheet and/or packing slip.
- Transit damage.

If any part of VS-656DC3 is damaged or lost, immediately notify the shipper.

|  | a converter is used as common. |

## CAUTION

Never move, lift or handle the VS-656DC3 cabinet by front cover or terminal stands. Lift the cabinet from bottom.

## LOCATION

Location of the equipment is important to achieve proper performance and normal operating life. The VS-656DC3 units should be installed in areas where the following conditions exist.

- Ambient temperature: -10 to $+45^{\circ} \mathrm{C},+14$ to $113^{\circ} \mathrm{F}$
- Protected from rain or moisture.
- Protected from direct sunlight.
- Protected from corrosive gases or liquids.
- Free from airborne dust or metallic particles.
- Free from vibration.
- Free from magnetic noise.

## CAUTION

To house multiple VS-656DC3 in a switchgear, install a cooling fan or some other means to cool the air entering the inverter below $45^{\circ} \mathrm{C}$ ( $113^{\circ} \mathrm{F}$ ).

## MOUNTING SPACE

Install VS-656DC3 vertically and allow sufficient space for effective cooling as shown in Fig. 1.

## WIRING

## INTERCONNECTION

The following shows an interconnection diagram. With digital operator, the operation can be performed by wiring the main circuit only.
(Terminal © shows main circuit and $O$ control circuit.)

[^1]Fig 2 Interconnections

## MOLDED-CASE CIRCUIT BREAKER (MCCB)

Be sure to connect MCCBs between the AC main circuit power supply and input $A C$ reactor. Connect magnetic contactors if necessary. Recommended MCCBs and magnetic contactors are listed in Table 1.

Table 1 Molded-case Circuit Breakers and Magnetic Contactors

## , 200 V Class

* Made by MARCON Electronics.

## CONTROL CIRCUIT

The external interconnection wiring must be performed with following procedures.

After completing VS-656DC3 interconnections, be sure to check that connections are correct. Never use control circuit buzzer check.
(1) Separation of control circuit leads and main circuit leads

Signal leads must be separated from main circuit leads and other power cables to prevent erroneous operation caused by noise interference.
(2) Control circuit leads (contact ouṭput) must be separated from leads.

Use the twisted shielded or twistedpair shielded lead for the control circuit line and connect the shield sheath to the converter terminal. See Fig. 3.

Fig. 3 Shielded Lead Termination
 with insulating tape
(3) Wiring distance

It is recommended that the wiring distance of the signal leads be 50 meters ( 164 feet) or below.

## GROUNDING

Ground the casing of the VS-656DC3 using ground terminal $G$ (E).
(1) Ground resistance should be $100 \Omega$ or less.
(2) Never ground VS-656DC3 in common with welding machines, motors, and other large-current electrical equipment, or ground pole. Run the ground lead in a separate conduit from leads for large-current electrical equipment.
(3) Use the ground leads which comply with AWG standards and make the length as short as possible.
(4) Where several VS-656DC3 units are used side by side, all the units should preferably be grounded directly to the ground poles. However, connecting all the ground terminals of VS-656DC3 in parallel, and ground only one of VS-656DC3 to the ground pole is also permissible (Fig. 4). However, do not form a loop with the ground leads.

## EXAMPLE OF CORRECT WIRING

When connecting power line to VS-656DC3 r, s terminals and inverter $\mathrm{r}, \mathrm{s}$ terminals, be sure to use primary power line as shown in Fig. 5 (a).

(a) Correct Wiring

(b) Wrong Wiring

Fig. 5 Example of Wiring

## WIRE AND TERMINAL SCREW SIZES

The wire sizes and types are shown in Tables 4 and 5. The sizes of the closedloop connectors are shown in Table 6.

Table 4200 V Class Wire Size

| Circuit | $\begin{gathered} \text { Model } \\ \text { CIMR-DCA } \end{gathered}$ | Output HP (kW) | Terminal Symbol | TerminalScrew | $75^{\circ} \mathrm{C}$ Copper Wire Range |  | Wire Type |

|  |  |  | E | M8 | 14-10 | 2-5.5 |  |
|  |  |  | r, A, r1, © 1, t1 | M4 | 20-14 | 0.5-2 |  |
| Control | Common to All Models | - | 1-32 | M3.5 | 20-14 | 0.5-2 | Twisted shielded wire with class 1 wiring or equivalent. |

## IMPORTANT

Wire size should be determined considering voltage drop. Voltage drop is obtained by the following equation: select the size so that voltage drop will be less than $2 \%$ of normal rated voltage.

Phase-to-phase voltage drop (V) =
$\sqrt{3}$ wire resistance $(\Omega / \mathrm{km}) \times$ wiring distance $(\mathrm{m}) \times$ current $(\mathrm{A}) \times 10^{-3}$

Table 5400 V Class Wire Size

## EXTERNAL TERMINALS

## MAIN CIRCUIT

#### Abstract

R, S, T : Main circuit input terminals. Connected to the secondary side of input AC reactor. r, s200 : Operation power supply input terminals. Used for excitation of cooling fan and r, s400: in-rush preventive MC.

#### Abstract

NOTE When 200 V class is used for the operating power supply, connect between $r$ and s200. When 400 V class is used, connect between $r$ and $s 400$. $r_{1}, s_{1}, t_{1}$ : Terminals for power supply voltage detection. Connected to the primary side of input AC reactor.

NOTE Be sure to match with the main circuit phase order. P, N : Output terminals. $P$ indicates positive and $N$ indicates negative. Two terminals are provided for each type.

## NOTE

Up to three closed-loop connectors can be connected to one terminal. Therefore, up to 6 output cables each for $N$ and $P$ can be accepted in the unit.
$\operatorname{Pr}_{1}, \operatorname{Pr}_{2}: \quad$ Terminals for in-rush preventive potentiometer mounting.
NOTE
According to the output side connection capacitor capacity (inverter main circuit capacitor), the in-rush potentiometer must be connected externally.

E: Enclosure grounding terminal.

## CONTROL TERMINALS

## Sequence Input

In the input circuit insulated by photocouplers, circuit voltage and current are 24 VDC 8 mA per circuit.
All input signals except RUN SB signal are status signals. (RUN SB signal is internally held.) When RUN SB and RESET are input, the input must be held more than 40 ms .

Table 7 Sequence Input Termınals

|  | Terminal No. | Description |
| :---: | :---: | :---: |
| 1 | RUN SB | PWM converter operation start command CLOSED : Start (RUN SB signal is internally held.) |
| 2 | $\overline{\text { STOP }}$ | PWM converter operation stop command OPEN : Stop (stop with priority) |
| 3 | EX P FLT | External fault CLOSED : External fault *1 |
| 4 | RESET | Fault reset CLOSED : Reset |
| 5 | Reserved | Not used *2 |
| 6 | Operatıon Signal Selection | OPEN : Run according to Sn-04 1st, 2nd setting <br> CLOSED : Run by run/stop signal from operator |
| 7 | Option/Converter Ref. Selection | OPEN : Run by run command, voltage ref from option *2 CLOSED : Run by run command, voltage ref from inverter |
| 8 | External Baseblock A | Stops converter PWM operation. (NO contact input) *2 |
| 11 | Sequence Common | Sequence input common terminal |
| *1 Converter process method can be selected at external fault input. (Sn-12) <br> *2 Multi-function contact input. Standard setting prior to shipping. (Sn-15 to 18) |  |  |

## Contact Output

Output circuit insulated by relays. Can be used for 250 VAC or 30 VDC 1 A or less.

Table 8 Contact Output Termınals

| Terminal No. | Description |  |
| :---: | :--- | :--- |
| 18 | CLOSED at fault | Fault contact output NONC contact |
| 19 | OPEN at fault |  |
| 20 | Common |  |
| 9 | CLOSED at RUN | RUN contact output NO contact* |
| 10 | Common |  |

* Multi-function contact output. Standard setting prior to shipping.

## Photocoupler Insulation Output

Status output signals insulated by photocouplers. Can be used for 48 VDC 50 mA or less. Since all photocoupler outputs are multi-function outputs, the output can be selected according to the applications.*1

Table 9 Photocoupler Insulation Output Terminals

| Terminal No. |  | Description |  |
| :---: | :--- | :--- | ---: |
| 25 | Converter Operation <br> Enable Signal | CLOSED : Converter RUN command can be accepted. |  |
| 26 | Minor Fault (Alarm) | CLOSED : Minor fault occurrence | $* 2$ |
| 28 | Output Voltage <br> Coincidence | CLOSED : Converter output voltage coincides with <br> reference value. |  |
| 29 | MC Actuating | CLOSED : MC for the short circuit of in-rush current |  |
| limit resistance is closed. |  |  |  |$\quad * 3$| *3 |
| :--- |

*1 Multi-function output function selection list (Sn-20 to 24)
*2 Fault mode selection (Sn-13, 14)
*3 Used for ride-through operation interlock with inverter.
Note : When L loads such as relay coils are driven by photocoupler output, be sure to insert a freewheel diode.

Select circuit voltage/current or above for the freewheel diode ratings.

## Analog Monitor Output

Monitor signal which outputs the internal status level in analog. Output is up to $\pm 11 \mathrm{~V} 2 \mathrm{~mA}$ and resolution is equivalent to full-scale 8 bits.

Table 10 Analog Monitor Output Terminals

| Terminal No. | Description |
| :---: | :--- |
| 21,22 | Output capacity : $\pm 11 \mathrm{~V} \mathrm{2} \mathrm{mA} \quad$ Resolution : Full scale 8 bits <br> Multi-function monitor* <br> Standard setting prior to shipment : Converter output power <br> monitor ( $\pm 10 \mathrm{~V} / 100 \%)$ |
| Common : No. 22 terminal | Output capacity +10 V 2 mA <br> Input current monitor ( $+5 \mathrm{~V} / 100 \%)$ <br> Common : No. 24 terminal |

* Refer to bn-17 for multi-function monitor selection.

## Blown Fuse Detection

Output circuit insulated by relays. Can be used for 250 VAC or 30 VDC 0.5 A or less.
Table 11 Blown Fuse Detection Termınals

| Termınal No. | Description |  |
| :---: | :--- | :--- |
| ef1, ef2 | OPEN at blown <br> fuse | This contact output is avalable for models <br> CIMR-DCA 2015, 2022, 4015, 4030, 40tj <br> (Models using main circuit terminals © and $\Theta$ <br> for control power supply (RCC). |

## TEST OPERATION

## CHECK BEFORE TURNING POWER ON

After completion of installation and wiring, check for
(1) proper wiring
(2) short circuit due to wire clippings
(3) loose screw-type terminals
(4) proper load

## SETTING THE LINE VOLTAGE SELECTING CONNECTOR FOR 400V CLASS

The line voltage selecting connector shown in Fig. 6 must be set according to the type of main circuit power source. Insert the connector at the position showing the appropriate line voltage. The unit is preset at the factory for 440 line voltage.

Fig 6 Selection of Line Voltage

## OPERATION

## DIGITAL OPERATOR

Digital operator has DRIVE mode and PRGM mode. Selecting DRIVE mode enables the inverter to operate. PRGM mode enables the programs to be written-in. DRIVE and PRGM modes can be switched by

PRGM key only when stopped.

## DRIVE MODE

The display item flow chart in the DRIVE mode after the power supply has been turned on is shown below.

*1 When a fault occurs before the power supply is turned off, the fault contents are displayed and blinks for 5 seconds. After blinking, it is changed automatically to the item selected by bn-13.
When any key is depressed during blinking, the mode of "fault 2 before power supply off ${ }^{n}$ is transmitted.
When no fault has occurred before the-power supply was turned off, the item selected by bn-13 is displayed.
*2 When no fault has occurred before the power supply was turned off, the faults before the power supply was turned off are not displayed.
*3 On-XX is displayed when $\mathrm{Sn}-03$ set value is 1010 or 1001.

## PROGRAM (PRGM) MODE

In the program mode, $A n-X X, b n-X X, C n-X X$ or $O n-X X$ setting and reading are performed. The display status flow chart of each constant in the program mode is shown below:

(Constant Setting and Reading Procedures)
(1) Depress $\frac{\text { PRGMM }}{\text { DRIVE }}$ key to enter the PRGM mode.
(2) Depress DSPL key to select the constant type (An-XX, bn-XX, etc.)
(3) Depress $\checkmark$ or $\triangle$ key to select the constant number to be set or read.
(4) Depress $\frac{\text { DATA }}{\text { ENTER }}$ key to display the selected constant data.
(5) Depress $\underset{\text { RESET }}{>}, \checkmark$ or $\triangle$ key to set the data.
(6) Depress $\left[\frac{\text { DATA }}{[N T E R}\right]$ key to write-in the data.
(7) Depress DSPL key to display the constant number again. Repeat steps (2) to (6) to perform setting or reading.

- When the set value is not within the setting range, it blinks for 2.5 seconds and the set value before the change is displayed.
- When the set value is within the setting range, End is displayed for 0.5 second after $\frac{\text { DATA }}{\text { ENTER }}$ key is depressed.

## OPERATION BY DIGITAL OPERATOR (SET PRIOR TO SHIPMENT)

When the power supply is turned on, the output voltage reference is displayed.
Depress DSPL key to change to output voltage display.

Change to output frequency display by DSPL key.

Start the operation by RUN key.

Stop the operation by ${ }^{\text {stop }}$ key.

## OPERATION BY EXTERNAL TERMINAL SIGNALS

## MAINTENANCE

## PERIODIC INSPECTION

VS-656DC3 requires very few routine checks. However, performing daily checks as shown in Table below will prevent potential accidents and secure highly reliable operation for a long time. Before checking, disconnect the main circuit power, and check that the CHARGE indicator is OFF.

Table 12 Periodical Inspection

| Check Item | Check for | Action |
| :--- | :--- | :--- |
| External Terminal, <br> Unit Mountıng Bolt, <br> Connector, etc. Loose screw | Tighten |  |
| Coolıng Fın | Loose connector | Mount the connector again |
| Accumulated dust or dirt | Blow by dry compressed air of <br> $39.2 \times 10^{1}$ to $58.8 \times 10^{4}$ Pa pressure |  |
| Prınted Cırcuit Board | Accumulated conductive dust or oil <br> mist | Clean the board <br> If dust or oil still remain, replace <br> the board |
| Cooling Fan | Excessive noise or vibration <br> Cumulative operation time exceeds <br> 20,000 hours | Replace the cooling fan |
| Power Element | Accumulated dust or dirt | Blow by dry compressed air of <br> $39.2 \times 10^{4}$ to $58.8 \times 10^{1}$ Pa pressure |
| Smoothıng Capacitor | Discoloration, odor, etc | Replace the capacitor or converter <br> unit |

## PROTECTIVE FUNCTION (FAULT DISPLAY)

If a transistor converter detects a fault, the fault is displayed on the digital operator and fault contact output operated to stop the transistor converter. (When a minor fault occurs, an alarm is output and operation is continued.)

Provide proper corrective action after troubleshooting.
Table 15 Protective Function (Fault Display)

| Fault Display | Contents | Description | Remarks |
| :---: | :---: | :---: | :---: |
| טיצ0 | Undervoltage (PUV) | Output voltage becomes undervoltage during operation. | - Vour $\leqq 210$ VDC power supply fault <br> - Momentary overload |
| Cun | Undervoltage (CUV) | Control power supply becomes undervoltage during operation. | - Power supply in unit fault |
| 178 | Undervoltage (MC-ANS fault) | Main circuit contactor (MC) does not operate correctly. | - Unit fault, etc. |
| 810 | Undervoltage (AUV) | Input voltage becomes undervoltage during operation. | - Vin $\leqq 150$ ゾAC <br> - Power supply fault (open phase) |
| RFí | Fuse blown (ACFU) | Input side fuse is blown. | - Output shortcircuit, grounding <br> - Power element fault |
| OFíd | Fuse blown (DCFU) | Output side fuse is blown. | - Output shortcircuit, groundıng |
| 9Fí | Fuse blown (Drive Unit) | Drive unit fuse in model CIMR-DCA4300 is blown.* | - Output shortcırcuit, grounding <br> - Power element fault |
| OL | Input overcurrent | Excessive input current and output side grounding | - Output shortcircuit <br> - Power supply drop |
| 0 O | Output overvoltage | Output voltage becomes overvoltage. | - Vour $\geqq 400 \mathrm{~V}$ <br> - Excessive regenerative power |
| OH | Radiation fin overheat | Radiation fin is overheated. | - Fin temperature $\geqq 90^{\circ} \mathrm{C}$ ( $194^{\circ} \mathrm{F}$ ) <br> - Excessive ambient temperature |
| FdEu | Power supply frequency fault | Power supply frequency exceeds allowable value. | - Power supply fault |
| c9\% | Transmission fault converter $\leftrightarrow$ operator | Check sum and check pattern fault | - Hardware fault |
| [PF\%: | Transmission fault converter $\leftrightarrow$ operator | Check sum and watchdog timer fault | - Hardware fault |
| cofec | Baseblock fault | Baseblock circuit malfunction | - Hardware fault |

* CIMR-DCA4300 is provided with three drive units : Four fuses per unit When the LED (FU) on the drive unit is lit. it means one or more drive unit fuses are blown. Remove the top cover, and you can find LED (FU) on the drive unit.

Table 15 Protective Function (Fault Display) (Cont'd)

| Fault Display | Contents | Description | Remarks |
| :---: | :---: | :---: | :---: |
| [PFS] | NVRAM fault | SRAM fault in NVRAM | - Hardware fault |
| [9584 | NVRAM fault | BCC check fault | - Hardware fault |
| [PFS5 | A/D converter fault in CPU | Conversion tıme exceeded, improper conversion value | - Hardware fault |
| [9F 56 | Optional connection fault |  | - Hardware fault |
| [0\% | DSP hardware fault | Transmission error, A/D error, internal RAM error, ROM error | - Hardware fault |
| [PF2n | Optional A/D converter fault |  | - Hardware fault |
| [9F24 | Converter card error | Hardware fault, inproper mounting | Hardware fault |
| OPES: | kVA selection fault | kVA selection is not normal. | Settıng and hardware fault |
| OPES2 | Constant setting range fault | Constant exceeds setting range. | Setting and hardware fault |
| OL: | Converter input current OL | , Converter input overload | Excessive load, alarm possible to select * |
| 012 | Converter output current OL | ¢ Converter output overload | Excessive load, alarm possible to select *1 |
| FRn | Cooling fan stop | Cooling fan stops. ${ }^{* 1}$ | Alarm possible to select ${ }^{* 2}$ |
| E5 | External fault | External fault is input. | Alarm possible to select ${ }^{* 3}$ |
| $0^{\circ}$ | Digital monitor fault | The monitor is mounted when under the program mode or during operation by the operator. | Check the function. |
| Err | NVRAM writing fault | NVRAM internal write data did not match when init1alizing the constant. | Hardware fault. |

*1 CIMR-DCA4300 is provided with three drive units : One cooling fan per unit.
When the LED (FAN) on the drive unit is lit, it means the drive unit cooling fan has stopped.
Remove the top cover, and you can find the LED (FAN) on the dive unit.
*2 Fallure selection (Sn-13, 14)
*3 Failure selection (Sn-12)

## PRECAUTIONS

## TOTAL LOAD CAPACITY

The total load capacity must be less than the converter rated output capacity.

| Pout: | Converter Rated Output HP (kW) |
| :---: | :---: |
| $P_{M 1} \text { to } P_{M N} \text { : }$ | Motor Output HP (kW) |
| $\eta_{M}:$ | Motor Efficiency 0.9* |
| ${ }^{\text {I }}$ INV ${ }^{\text {: }}$ | Inverter Efficiency 0.95* |
|  | When a motor less than $10 \mathrm{HP}(7.5 \mathrm{~kW})$ is used, set the motor efficiency and inverter efficiency to 0.85 and 0.9 , respectively. |

## INPUT AC REACTOR

Input 3-phase reactors each of which corresponds to each capacity of the VS-656DC3, (considering saturation current and thermal items) are necessary for the PWM converter VS-656DC3. The following shows the AC reactor list. Use the proper reactors for applications.

Table 16 AC Reactor List

| VS-656DC3 Capacity |  | Rated Current (Arms) | Saturation Current (Peak A) | Inductance ( mH ) | AC Reactor Code No. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | A2015 | 64 | 240 | 1.32 | X 002666 |
|  | A2022 | 96 | 360 | 0.88 | X 002667 |
|  | A2037 | 160 | 600 | 0.53 | X 002668 |
|  | A2075 | 300 | 1150 | 0.28 | X 002670 |
| $\begin{aligned} & \text { 』 } \\ & \underset{\sim}{U} \\ & > \\ & \underset{寸}{8} \end{aligned}$ | A4015 | 32 | 120 | 5.28 | X 002671 |
|  | A4030 | 64 | 240 | 2.64 | X 002672 |
|  | A4045 | 96 | 360 | 1.76 | X 002673 |
|  | A4075 | 165 | 620 | 1.02 | X 002674 |
|  | A4160 | 300 | 1200 | 0.57 | X 002675 |
|  | A4300 | 600 | 2400 | 0.28 | X 002677 |

## INTERLOCKING WITH CONNECTING INVERTERS

The PWM converter VS-656DC3 can be used as diode converters *l if the in-rush current control potentiometer shortcircuiting MC is closed even if the input side switching elements are not performing PWM operation. However, when the above MC is opened, power cannot be supplied to the load. Therefore, it is necessary to shut off the converter load (inverter output) according to the MC operation status.

The VS-656DC3 outputs "MC Operating (Closed by MCon)" from the control board terminal 29 (PHC output) as an MC operation signal. By using this signal, interlock the converters with the inverter side.*2
*1 Continuous current conduction at the motor drive side is possible within the rating, but not possible at the power supply regenerative side. Pay attention to rated output current since output voltage generates approx. $20 \%$ regulation for the diode rectification value.
*2 Interlocking at hardware is recommended.

## Typical Interlock

(1) When reactivation after momentary power loss is not performed (Coasting to a stop by momentary power loss detection)
Insert the converter "MC Operating" output to the inverter "External Fault" input.

- The inverter "External Fault" input is NC contact input. To prevent external fault operation at power supply ON, select "Eternal fault accepted only during RUN".

VS-676XX3, 616H3, G3 settings:
External fault NC contact input: Set $\operatorname{Sn}-12$ lst digit to "1". External fault detected only during RUN: Set $\operatorname{Sn}-12$ 2nd digit to "1".
(2) When reactivation after momentary power loss is performed as system
Insert the converter "MC Operating" output to the inverter
"External BB" input.

- Select reactivation after momentary power loss at the inverter side. Then select the coasting lead-in mode or speed search mode.
- Select NC contact input for the inverter "External BB" input.

## INTERLOCKING WITH CONNECTING INVERTERS (Cont'd)

VS-676XX3, 616H3, G3 settings:
External BB NC contact input: Set one of Sn-15 to 18 to "09" for VS-676XX3.
Set one of $\mathrm{Sn}-15$ to 18 to "64" for G3 or H3.

Continuous operation after momentary power loss: Set Sn -11 3rd digit to "1".
Coasting lead-in mode: Set $\mathrm{Sn}-07$ lst digit to " 1 ".

## CONVERTER POWER OFF AND HARMONIC FILTER

- Make a sequence to open the converter power side after the converter operation stops.
- Be sure to install a harmonic filter. See Table 17.

Table 17 Harmonic Filter List

| VS-656DC3 |  | Harmonic Filter (LC Filter) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Voltage | ModelCIMR-L.. | Reactor (L) |  | Capacitor (C) |  |
| V |  | Specifications | Code No. | Specifications | Code No. |
| $\begin{gathered} 200 \\ \text { to } \\ 230 \end{gathered}$ | 2015 | $30 \mathrm{~A}, 0.35 \mathrm{mH}$ | X2492 | $100 \mu \mathrm{~F}$ | C3477 |
|  | 2022 | $50 \mathrm{~A}, 0.21 \mathrm{mH}$ | X2494 | $150 \mu \mathrm{~F}$ | C3186 |
|  | 2037 | $80 \mathrm{~A}, 0.13 \mathrm{mH}$ | X2497 | $200 \mu \mathrm{~F}$ | C3187 |
|  | 2075 | $160 \mathrm{~A}, 0.07 \mathrm{mH}$ | X2556 | $400 \mu \mathrm{~F}$ | C3190 |
| $\begin{aligned} & 380 \\ & . \text { to } \\ & 466 \end{aligned}$ | 4015 | $15 \mathrm{~A}, 1.42 \mathrm{mH}$ | X2501 | $25 \mu \mathrm{~F}$ | C3481 |
|  | 4030 | $30 \mathrm{~A}, 0.7 \mathrm{mH}$ | X2503 | $50 \mu \mathrm{~F}$ | C3482 |
|  | 4045 | $50 \mathrm{~A}, 0.42 \mathrm{mH}$ | X2505 | $75 \mu \mathrm{~F}$ | C3483 |
|  | 4075 | $80 \mathrm{~A}, 0.26 \mathrm{mH}$ | X2508 | $100 \mu \mathrm{~F}$ | C3484 |
|  | 4160 | $150 \mathrm{~A}, 0.15 \mathrm{mH}$ | X2567 | $200 \mu \mathrm{~F}$ | C3485 |
|  | 4300 | $250 \mathrm{~A}, 0.09 \mathrm{mH}$ | X2569 | $400 \mu \mathrm{~F}$ | C3486 |

* It is necessary to change the inverter side setting depending on whether contınuous operation after momentary power loss occurs or not

Fig. 7 Typical Interlocking Connection with Inverter

## (3) Sn-15 to 18: Multi-function Input Function Selection

VS-656DC3 $\quad$ System Constant Description Sn-15 to 18 : Multi-function Input Function Selection List
(Must be held for 40 msec or more.)

| Set Value | Function | Contents |
| :---: | :--- | :--- |
| 01 | Operation signal selection | Open : Run according to Sn-04 1st, 2nd digit setting <br> Closed : Run by RUN/STOP signal from operator |
| 02 | Option/inverter command <br> selection | Open : Run according to Sn-08 1st, 2nd digit setting <br> Closed : Run by RUN command or frequency ref. <br> from inverter |
| 08 | External baseblock A (NO contact <br> input) | Closed : Converter PWM operation is shut. |
| 09 | External baseblock B (NC contact <br> input) | Open : Converter PWM operation is shut. |
| $20-2 F$ | External fault signal selection 1 | See external fault signal selection list below. |
| $30-3 F$ | External fault signal selection 2 | See external fault signal selection list below. |
| $40-4 F$ | External fault signal selection 3 | See external fault signal selection list below. |
| $50-5 F$ | External fault signal selection 4 | See external fault signal selection list below. |
| FF | Not used |  |

Note : Set values must be set for $\mathrm{Sn}-15$ to $\mathrm{Sn}-18$ in ascending order (i. e. 01 for $\mathrm{Sn}-15,02$ for $\mathrm{Sn}-16 \ldots$ ). Do not use the same set value more than once except for FF .

## (4) Sn-20 to 24: Multi-function Output Function Selection

| VS-676VD3 |  | System Constant Description Sn-20 to 24 : Multi-function Output Function List |  |
| :---: | :---: | :---: | :---: |
| (Output must be held for 100 msec after function operation.) |  |  |  |
| Set Value |  | Function | Contents |
| 00 | Run |  | Closed : Running |
| 01 | Zero |  | Closed : Converter output voltage is established |
| 02 | Oper | voltage coincidence | Output voltage = output voltage reference |
| 06 | Oper | ready | Closed : Converter operation ready status (Initial data receiving completed selected) |
| 07 | Dur | UV (CV1) | Closed : Momentary power loss detection |
| 08 | Bas |  | Closed : Baseblock |
| 09 | Bas | k release | Closed. Baseblock release |
| OA | In- | MC operating | Closed • In-rush MC operating |
| 10 | Min |  | Closed : Minor fault occurrence |
| 11 | Res | mmand input | Closed : Reset command mput |

## CONTROL CONSTANT (Cn-XX)

VS-656DC3 Control Constants Cn-XX

| Data No. | Data Name | Setıng Unıt | Settıng Range | Inıtıal Value |
| :---: | :--- | :---: | :---: | :---: |
| Cn-02 | Voltage Coıncıdence Detectıon Level | $0.01 \%$ | $0.00-100.00$ | $100.00^{*}$ |
| Cn-03 | Voltage Coincıdence Detection Width | $0.01 \%$ | $0.00-100.00$ | 2.00 |
| Cn-07 | Torque Reference Filter 1 | 1 msec | $0-500$ | 0 |
| Cn-08 | Input Current OL Detectıon Startıng Current | $1 \%$ | $30-150$ | 112 |
| Cn-09 | Input Current OL Operation Tıme | 1 sec | $1-120$ | 60 |
| $\mathrm{Cn}-12$ | Not used | - | - | 00000 |
| $\mathrm{Cn}-14$ | Output Current OL Detectıon Startıng Current | $1 \%$ | $50-200$ | 110 |
| $\mathrm{Cn}-15$ | Output Current OL Operation Time | 1 sec | $1-120$ | 48 |
| $\mathrm{Cn}-17$ | PUV Detection Level | 1 V | $131-210(200 \mathrm{~V})$ | $131(200 \mathrm{~V})$ |
| $\mathrm{Cn}-19$ | Assured Tıme for Momentary Power Loss | 0.01 sec | $0.00-2.00$ | 1.00 |
| $\mathrm{Cn}-20$ | No. of Fault Retry Operatıons | 1 | $0-10$ | 0 |
| $\mathrm{Cn}-30$ | Not used | - | - | 100.0 |
| $\mathrm{Cn}-31$ | Not used | - | - | 100.0 |
| $\mathrm{Cn}-32$ | Not used | - | - | 100.0 |

* Corresponds to 340 V ( 200 V class) and 680 V ( 400 V class).

## APPLICATION CONSTANT (bn-XX)

| VS-656DC3 | Application Constants bn-XX |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Data No. | Data Name | Settıng Unıt | Settıng Range | Initial Value |
| bn-01 | Pressure Rise Time 1 | 0.1 sec | 0.0-3000.0 | 10.0 |
| bn-02 | Pressure Drop Time 1 | 0.1 sec | 0.0-3000.0 | 10.0 |
| bn-05 | AVR Proportional Gain | 1 | 0-300 | 10 |
| bn-06 | AVR Integral Time | 1 msec | 0-30000 | 500 |
| bn-07 | Plus Side Torque Limit | 0.01\% | 0.00-300.00 | 150.00 |
| bn-09 | Regenerative Side Torque Limit | 0.01\% | 0.00-300.00 | 150.00 |
| bn-11 | Trace Sampling Time* | 0.020 sec | 0.020-10.000 | 0.060 |
| bn-13 | Monitor No. after Power ON | 1 | 1-3 ${ }^{\dagger}$ | 1 |
| bn-17 | Multi-function Monitor Output Selection | 1 | 1-5, 9-15 $\ddagger$ | 14 |
| bn-18 | Multı-function Monıtor Output Gain | 0.001 | 0.001-10.000 | 1.000 |
| bn-22 | AO Option CH 1 Output Selection | 1 | 1-5, 9-15 ${ }^{\ddagger}$ | 01 |
| bn-23 | AO Option CH1 Output Gain | 0.001 | 0.001-10.000 | 1.000 |
| bn-24 | AO Option CH2 Output Selection | 1 | 1-5, 9-15 ${ }^{\ddagger}$ | 02 |
| bn-25 | AO Option CH2 Output Gaın | 0.001 | 0.001-10.000 | 1.000 |

* Data are traced in the setting unit of 0.020 sec period to renew the Dual Port RAM contents.
+1 Output voltage reference, 2: Output voltage feedback. 3: Output current
$\pm$ Corresponds to monitor constant (Un-XX).

REFERENCE SETTING CONSTANT (An-XX)
VS-656DC3 $\quad$ Reference Setting Constants An-XX

| Data No. | Data Name | Settıng Unıt | Settıng Range | Inıtıal Value |
| :---: | :---: | :---: | :---: | :---: |
| An-01 | Output Voltage Reference ${ }^{* 1}$ | $10^{-1} \mathrm{~V}$ | $300.0-340.0^{* 2}$ | $330.0^{*-2}$ |

*1 Effective when set values are displayed on the digital operator (JVOP-100).
Ineffective when transmission mode (transmission option) is selected.
*2 Doubled for 400 V class.

## MONITOR CONSTANT (Un-XX)

VS-656DC3 $\quad$ Monitor Constants Un-XX

| Data No. | Data Name | Settıng Unit Settıng Range |  | Initıal Value | Remarks |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Un-01 | Output Voltage Reference | VREF | $10^{-1} \mathrm{~V}$ | $300-340$ |  |
| Un-02 | Output Voltage Feedback | VFB | $10^{-1} \mathrm{~V}$ | $0.0-1000.0$ |  |
| Un-03 | Input Voltage | VS | $10^{-1} \mathrm{~V}$ | $0.0-550.0$ |  |
| Un-04 | Output Current | IOUT | $10^{-1} \mathrm{~A}$ | - |  |
| Un-05 | Input Current | IS | $10^{-1} \mathrm{~A}$ |  |  |
| Un-06 | Input Termınal Status | INRLY |  |  |  |
| Un-07 | Output Termınal Status | OUTRLY |  |  | $*$ |
| Un-08 | Fault before Power OFF |  |  |  |  |
| Un-09 | Effectıve Current Reference | IRREF | $10^{-1} \%$ | $-1500-150.0$ |  |
| Un-10 | Ineffective Current Reference | IIREF | $10^{-1} \%$ | $0.0-50.0$ |  |
| Un-11 | Primary Current Reference | IIREF | $10^{-1} \%$ | $0.0-150.0$ |  |
| Un-12 | Input Power Factor | IPHAI | $10^{-1} \%$ | $-100.0-100.0$ |  |
| Un-13 | Input Power | WIN | $10^{-1} \mathrm{~kW}$ |  |  |
| Un-14 | Output Power | WOUT | $10^{-1} \mathrm{~kW}$ |  |  |
| Un-15 | Input Frequency | FIN | $10^{-1} \mathrm{~Hz}$ |  |  |

* I/O terminal status display

Notes: 1. Input terminal status display Sequence input terminal 1 to 8 Light ON at closed, Light OFF at open

2. Output terminal status display Sequence output terminal Light ON at closed, Light OFF at open

## ORDER CONSTANT (On-XX)

Order constants have been preset at factory. Never change the constant.

| VS-656DC3 |  | Order Constants On-XX |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

|  | Fin Overheat | Thermostat |  |  |  |  |  |  |  |  |  |
|  | Power Supply Open phase | Motor coasts to a stop at power supply open phase detection. |  |  |  |  |  |  |  |  |  |
|  | Ground Fault Detectron | Motor coasts to a stop at approx. 50\% converter input current. |  |  |  |  |  |  |  |  |  |
|  | Power Frequency Error | Motor coasts to a stop by fluctuation more than $\pm 3 \mathrm{~Hz}$ rated input frequency. |  |  |  |  |  |  |  |  |  |
|  | Fan Stop | Fan stop detection |  |  |  |  |  |  |  |  |  |
|  | Power Charge Indication | Indicated untıl main output voltage is approx. 50 V or less. |  |  |  |  |  |  |  |  |  |
|  | Momentary Power Loss | Continuous operation during power loss less than 2 sec is available by setting constant. |  |  |  |  |  |  |  |  |  |
|  | Location | Indoor (protected from corrosive gases and dust) |  |  |  |  |  |  |  |  |  |
|  | Ambient Temperature | +14 to $104^{\circ} \mathrm{F}\left(-10^{\circ} \mathrm{C}\right.$ to $\left.+45^{\circ} \mathrm{C}\right)$ |  |  |  |  |  |  |  |  |  |
|  | Humidity | 90\% RH or less (non-condensing) |  |  |  |  |  |  |  |  |  |
|  | Vibration | $9.8 \mathrm{~m} / \mathrm{s}^{2}(1 \mathrm{G})$ less than 20 Hz , up to $1.96 \mathrm{~m} / \mathrm{s}^{2}(02 \mathrm{G})$ at 20 to 50 Hz |  |  |  |  |  |  |  |  |  |

## MEMO

## Varispeed-656DC3

## PWM TRANSISTOR CONVERTER

MODEL CIMR-DCA
